

RADOLID®

KSW

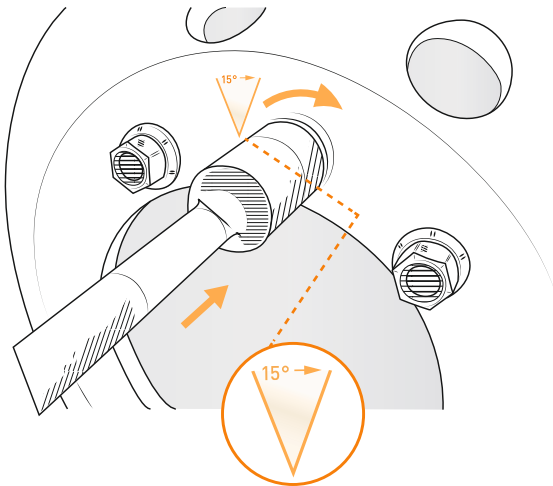

INSTALLATION INSTRUCTIONS

1.

- Put cap on wheel nut

2.

- Use lug/wheel wrench to twist as shown

DEINSTALLATION

Twist lug/wheel wrench anticlockwise. Remove cap.

WHY THE RADOLID-SYSTEM WORKS

DURABILITY

We use an engineering plastic with resilient mechanical properties for our wheel nut protective caps KSW. It is an impact and chemical-resistant material that, thanks to its enormous operating temperature range, is suitable for use in both snowy and icy conditions and at high temperatures such as occur due to frequent and longer braking. The cap covers the entire nut and bolt, thus preventing any troublesome rusting of the connection.

ROUND CROSS SECTION

RADOLID protective caps have a circular cross section in every case. This allows us to minimise residual stress generated during the production process so that the caps do not tear or split, even where large nut and bolt head tolerances are involved.

SECURE HOLD

Our patented fixing system guarantees a firm, secure hold. Our fixed value indicators help you to check the secure fit of the wheel nuts – quickly and easily.

PROTECTION AGAINST DAMAGE AND INJURY

In addition to safeguarding the bolt connection, our cap also protects your personal safety. It covers sharp edges to prevent any injuries.

Since 1961 **RADOLID Thiel GmbH** is specialized in the production and distribution of protection caps. In two production facilities we produce 4.000 different parts for over 3.000 customers. With that RADOLID has the largest portfolio of protection caps worldwide. RADOLID is your partner when it comes to the safety of your applications.

WHEEL NUT PROTECTION CAP

available in:

KSW

PRODUCT DESCRIPTION

- long durability
- secure hold due to patented fixing system
- easy installation
- available for widths across flats from 27mm to 33mm
- available in 7 colors
- Can be decorated with your individual multicoloured logo, photo or coat of arms. We can create your uniquely personal design with the aid of the latest digital printing technique

PART NUMBER	width across flat (mm)	nut	inner height (mm)
 KSW27-2-G37	27	standard nut	37
 KSW27-3-G35	27	sleeve nut	35
 KSW30-2-G40	30	standard nut	40
 KSW30-3-G40	30	sleeve nut	40
 KSW32-2-G43	32	standard nut	43
 KSW32-2-G56	32	standard nut	56
 KSW32-3-G38	32	sleeve nut	38
 KSW33-2-G43	33	standard nut	43
 KSW33-3-G47	33	sleeve nut	47
